GRANFIELD® FORT 15-15-5

A wide range of granular fertilizers manufactured physically and chemically, using high quality raw materials, to be homogeneous from chemical characteristics and physical appearance to ensure balanced distribution for plant nutrients in the field for all plants.

**Chemical characteristics**
To ensure balanced plant nutrition All formulas contains

**Nitrogen:** Nitrogen activates vegetation & is essential for assimilation & respiration. It is a key component of protein & chlorophyll. Lack of nitrogen is recognized by yellowish vegetation & slow growth.

**Phosphorous:** The need for phosphorus is greatest at the beginning of the growing season. A deficiency of phosphorus results in small plant size, few seeds, delayed maturation, & a reddish tinge to the plant.

**Physical characteristics:**
Granules size more than 90% is between 2-4 mm, with capability to control the sizes of the granules, 1-2mm granules for green area and lawns.

Homogeneous granular particle size, which make it easier for uniform spreading
Each granular contains all nutrients in one particle, which guarantee a balanced nutrient to the plants
Free flowing – using by hand or by mechanical spreader.

**Application Rate:**
GRANFIELD® FORT can be used as basal dressing. Top dressing, via one application or multi applications in the season for slow growth crops.

- **Vegetables:** 600-750 kg / hectare
- **Green houses:** 600-1000 kg / hectare
- **Mature Fruit trees:** 1-3 kg / tree
- **Young trees:** 50-250 grams / tree
- **Potato:** 500-750 kg / hectare
- **Landscape:** 20 – 30 g / m²
- **Golf Courses:** 20 – 30 g / m²

Rate of applications varies depend on soil nutrients content and plants nutrients requirements.
